ABOUT PRODAN

Prodan integrates sustainability into its core operations.

The metal processing machinery, software & automation systems are designed with environmental responsibility in mind, without compromising quality.

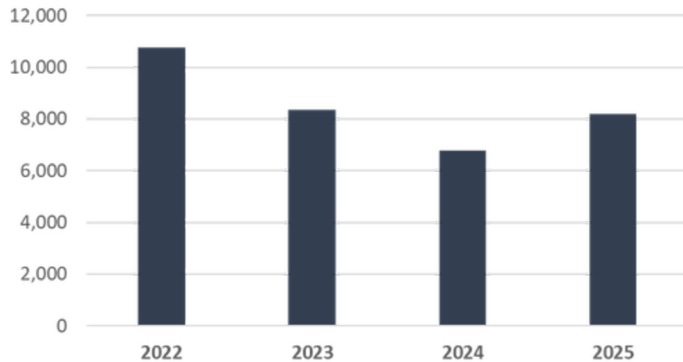

Powered by renewable electricity, Prodan's processes reflect its commitment to a greener future.

OUR FOOTPRINT

As a Danish manufacturing leader, Prodan is aiming for environmental responsibility across its operations and value chain.

Total GHG emissions (tCO2e)

Prodan actively measures and reports its GHG emissions, taking concrete steps to reduce its carbon footprint through renewable energy and innovative technologies.

Since 2022, the company has taken several steps towards emissions reductions, demonstrating progress in its climate commitment, especially when it comes to electricity consumption.

POLICIES & ACTIONS

- Produced more than 25% of its own electricity consumption from the installed solar panels
- Optimized facilities and production processes
- Enhanced waste separation systems
- Managing lighting, dust & industrial noise

BUILT FOR PERFORMANCE, DESIGNED FOR DURABILITY

Prodan empowers many sectors with different manufacturing solutions:

- Delivering reliable performance in mission-critical applications
- Maximizing operational efficiency across demanding environments
- Maintaining uncompromising quality standards
